

**IN THE SPECIFICATION:**

Substitute the following paragraph for the last full paragraph on page 7.

FIG. 3 representatively illustrates a cross-section of one of the pivot connections 30. In this view it may be seen that the pivot connection 30 includes a pivot pin 44 (depicted in FIG. 3 as a fastener of the type known to those skilled in the art as a "huck") about which the trailing arm 22 and lever arm ~~46~~ 36 rotate. Note that the pivot pin 44 may be other than a fastener and other than a "huck", and that other types of pivot connections may be used, without departing from the principles of the invention.
